Teach Yourself DevResults

Learning DevResults?

This page provides a logical progression through each topic needed to be a successful DevResults user.

This series of tutorials will first introduce you to the DevResults platform. First, you'll gain an understanding of:

- How we approach data management for M&E
- The tools and features we provide
- How we configure and enable those tools for each organization with a streamlined implementation process

Next, we'll take you through the basic concepts and skills for using DevResults. You'll learn:

- How data is added to the system
- How to visualize and analyze that data
- How to configure new projects or indicators in the system
- Advanced tools for complex data sources

Before getting started, make sure you **use a modern browser like Chrome, Firefox, Safari, or Edge** Some older browsers (like Internet Explorer) do not support DevResults' complex mapping and data querying tools.

Tutorials

1. **Introduction to DevResults**
2. **Log in and get started**
3. **Entering and reviewing data**
4. **Visualizations & MultiMatrix**
5. **Dashboards**
6. **Create a project**
