Assign an Indicator to a Project

Last Modified on 07/15/2025 11:25 pm EDT

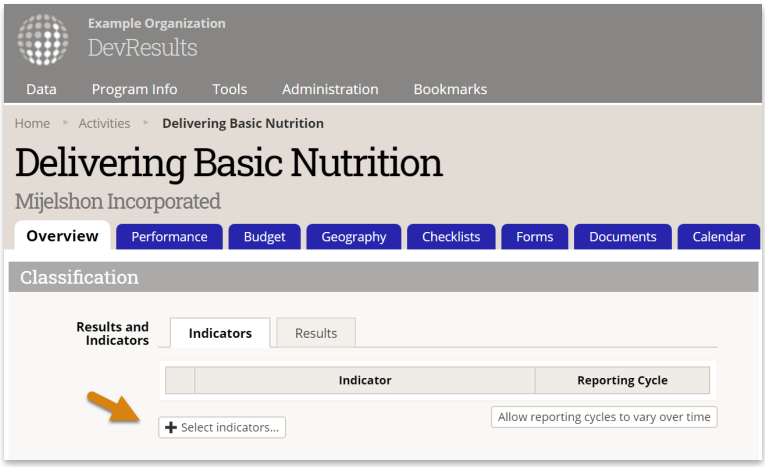
For a project to report on an indicator in DevResults, the indicator must be assigned to that project.

- **Assign Indicators to a Project**
- **Assign a Set of Indicators to Multiple Projects**
- **Assign Indicators to Projects using an Excel Template**

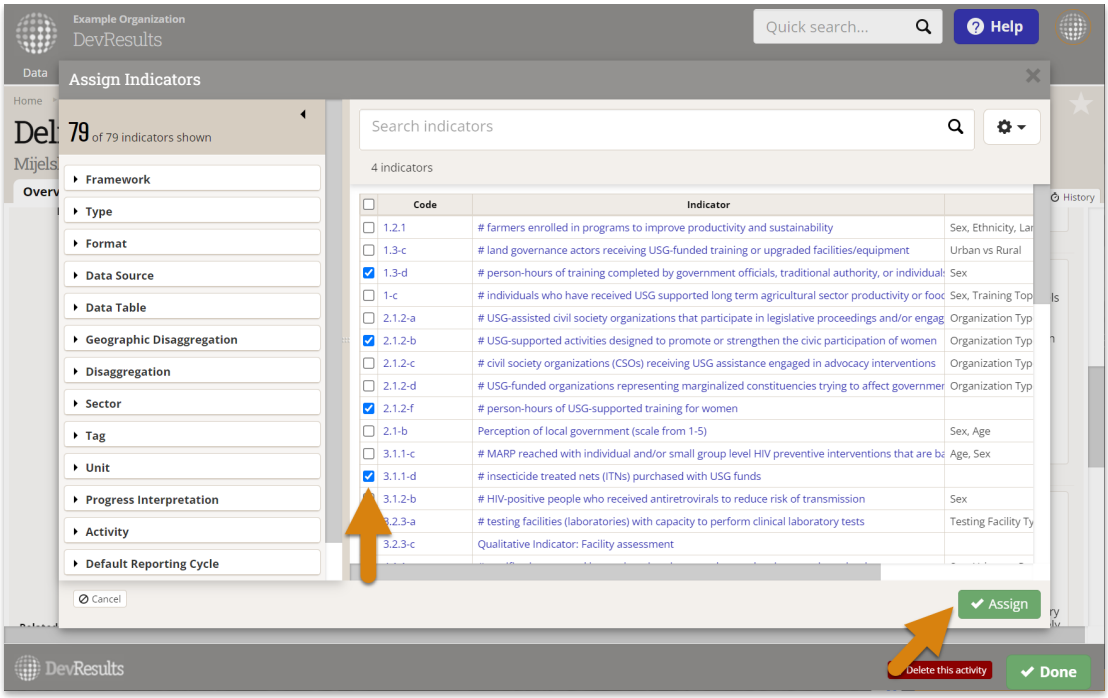
Assign Indicators to a Project

To assign one or more indicators to an project:

1. Go to the project's overview tab at **Program Info > Projects** and select your project
2. Scroll down to the **Classification** section
3. Click on **Select indicators**



In the popup, select the indicator(s) you'd like to assign to the project. You can filter the list of indicators by any of the associated info in the left-hand panel, or search by name or code in the search bar at the top. Then click **Assign**.



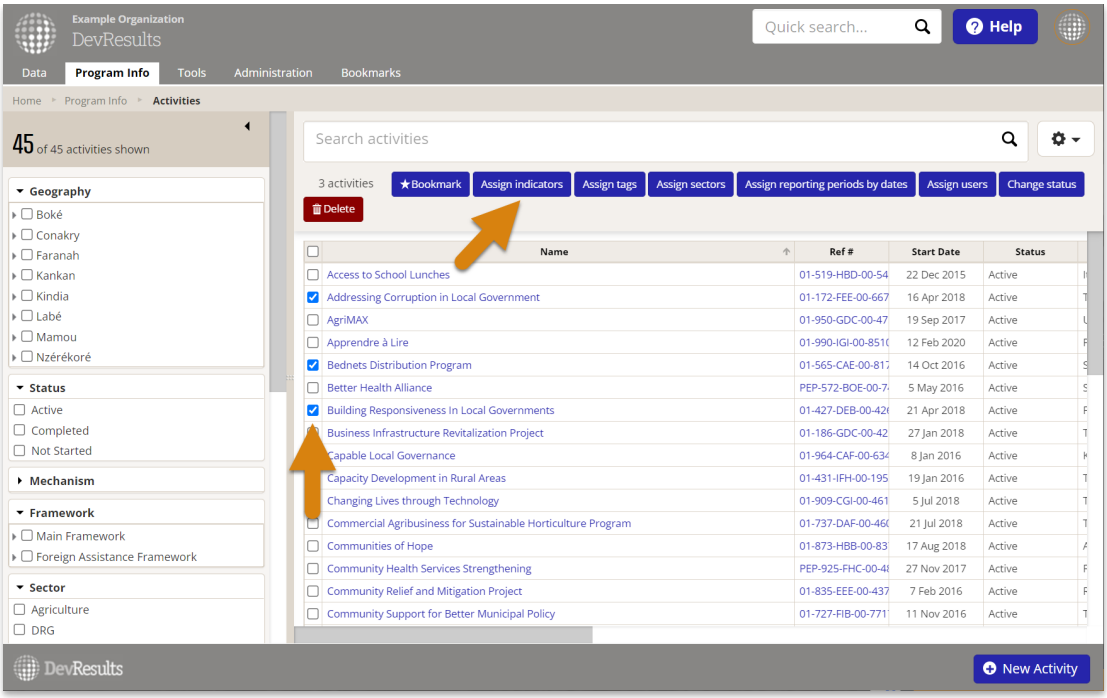
If the indicator is not listed in the popup index, see: **Define an Indicator**.

*If you do not see the **Select indicators** button, your permission group does not allow you to update this information. Please speak with your supervisor.*

Assign a Set of Indicators to Multiple Projects

DevResults also enables assignment of one or more indicators to multiple projects at the same time. To use this feature:

1. Go to the project index at Program Info > Project
2. Select one or more projects
3. Click **Assign indicators**
4. Select indicators and click **Assign**



Additionally, assignments to projects can be made using the same tools from the indicator side:

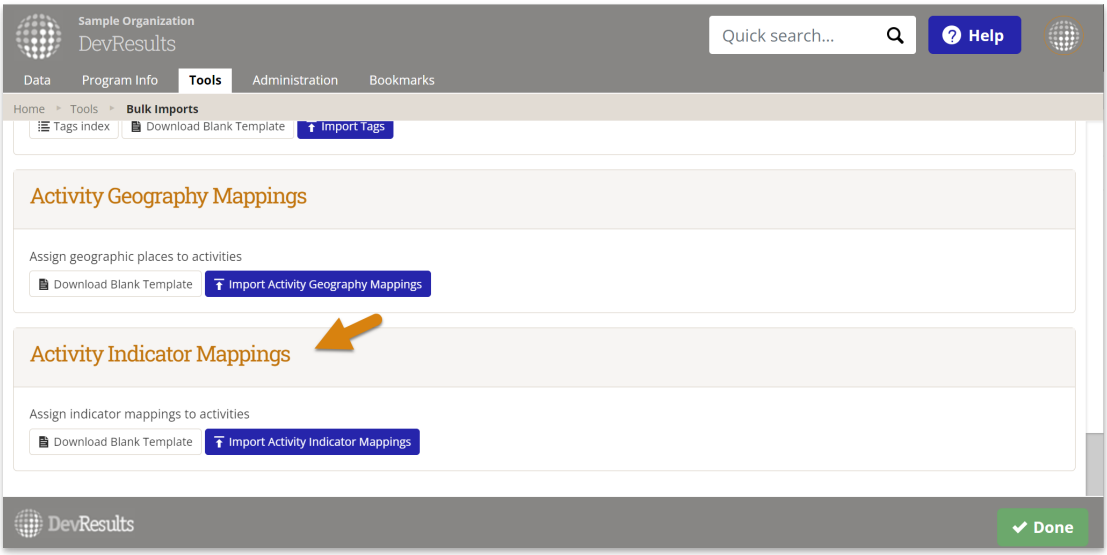
- From the indicator index at **Program Info > Indicators** (select indicators, click **Assign projects**, select projects, click **Assign**)
- Or at the bottom of an indicator's definition page (click **Assign Projects**, select projects, click **Assign**)

Indicators are assigned with their default reporting cycle (defined on the indicator's definition page), but **each indicator's reporting cycle can be edited for a project**.

Assign Indicators to Projects using an Excel Template

DevResults also offers an import tool to assign indicators to projects using an Excel template.

To import indicator assignments for multiple projects in one template, go to the **Tools > Bulk Imports** page. In the **Project Indicator Mappings** section, download a blank template.



Here's an example of a template for project indicator mappings. It shows three activities being assigned to a few

indicators each, with built-in dropdowns for the activities and indicators in the site.

Each Project-Indicator assignment must have a reporting cycle (to define whether the project should report the indicator quarterly, annually, etc.) You can choose the **Indicator's default reporting cycle**, which uses the default reporting cycle defined on the indicator definition page, or you can choose a different reporting cycle in the dropdown.

For example, you might have a scenario where most activities report an indicator quarterly, so that's set as the indicator's default, but a particular project might need to report it annually instead. This can be defined here.

	A	B	C	D	E
1	Activity	Indicator	Reporting Cycle		
2	Access to School Lunches	1.2.1 # farmers enrolled in progra	Indicator's default reporting cycle		
3	Access to School Lunches	1.3-c # land governance actors re	Indicator's default reporting cycle
