Enable and Disable DevResults Features

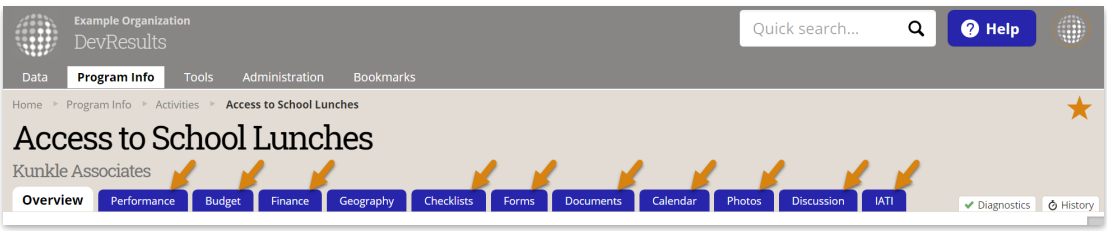

Last Modified on 10/06/2025 12:15 pm EDT

Organizations might want to disable some features of DevResults if they don't need those particular tools (or use other software to meet those needs) and want to simplify the DevResults user interface.

To do so, go to *Administration* > *Settings* and find the **Features** section. Disable features by clicking on the check-boxes next to the features. Only users who belong to a group with **View & Edit** permissions on **Program Settings** can enable and disable features.

Most of these features are tools that will be removed from project pages, shown as blue tabs below the project name. These tabs can be shown or hidden:

- Performance
- **Budget**
- Finance
- **Checklists**
- **Forms** (Form Library)
- Documents (Document Library)
- Calendar
- Photos (Photo Library)
- Discussion
- **IATI**

Additional features can be enabled/disabled:

- **Awarding Organizations:** shows/hides the Awarding Organization section on the Project Overview tab. Also

shows/hides the Awarding Organization filter in MultiMatrix.

- **Data Table Row Locking**: enables/disables **Data Table Row Locking**
- **Partner Dashboards:** enables/disables partners from creating dashboards. (Partners are users who belong to a permissions group with the "partner" role enabled.)
- **Relational Data Tables:** enables/disables **Relational (Linked) Data Tables**
- **Multiple Funding Sources**: shows/hides the Funding Sources grid on the **Administration > Funding Sources.** (Disable this feature if all of your organization's funding comes from one source, or if you do not need to track any financial information by funding source.)
