Get New Password

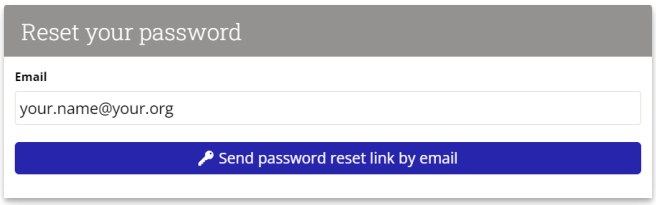

Last Modified on 09/08/2025 4:21 pm EDT

Whether you're forgotten your password or need to set up a new password, you can do both from the login page.

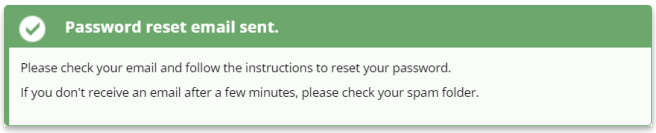

First, navigate to your DevResults site (____.devresults.com). Click on the **Reset password** button. (You no longer need to enter your email at this step.)

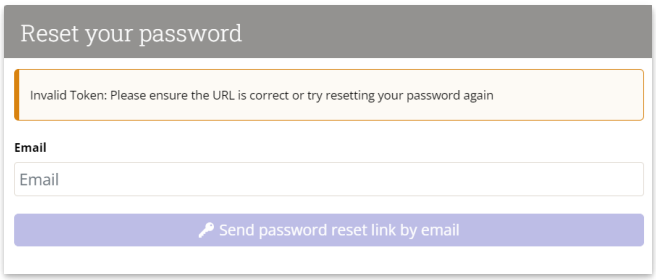

On the next page, enter the email associated with your DevResults account (likely your work email) and click the **Send password reset link by email** button.

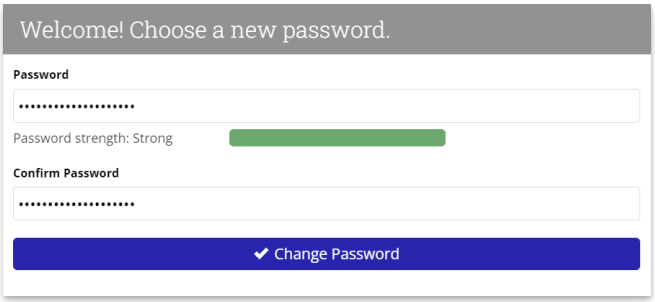

You'll be sent an email with a link to choose a new password. Check your email and follow the instructions to reset your password. If you don't see an email from DevResults Support (help@devresults.com), check your spam folder.

Please note that **the new password link will expire in three hours** If you receive the following message, you'll need to request a new password reset email.

If you click on the new password link within three hours, you'll be able to choose a new password. Be advised that passwords must be at least 8 characters long, and **commonly used or known leaked passwords** are not allowed.

Once you log in, if you would like to change your password to something else, you can **Change Your Password** from your user profile page.

Note : Because password reset links expire within three hours, site owners are advised not to send reset links to other users outside of their working hours.
