Dashboard Tile: Progress to Target

ast Modified on 08/20/2025 4:10 pm EDT

The **Progress to Global Target** and **Progress to Activity Target** dashboard tiles display icons for your choice of indicators to show how well you're doing against your targets.

- Progress to Global Target
- Progress to Activity Target

		Example Or DevRes	rganization SultS						
ľ	Data	Program I	nfo Tools	Administration	Bookmarks				
	Ma	in Page	Progress	Donor U	lpdates	Beneficiaries		Progra	m Overview
	Φ			Progress to Glob	oal Target			×

	1.3-d #	person-hours	s of training comp	leted by governmen	t officials	:	2019 Q4		Target: 30,000 Actual: 36,995 (123%)
	2.1.2-a	# civil society	organizations that	t participate in legis	lative proceedings	:	2019 Annual	A	
	2.1.2-b	# activities de	esigned to promot	e or strengthen the	civic participation c	of women	2020 Q1	0	
	4.1.2-a-	D # students	tested in reading	comprehension by t	he end of the prim	ary cycle			
	4.1-a #	person-traini	ngs in post-secon	dary certification are	eas	:	2019 Q4	8	

Note: The Progress to Activity Target tile is available to partners. The Progress to Global Target tile is not.

Progress to Global Target Tile

Configure your tile by clicking on the gear in the tile's top left corner. (You can only configure a tile on your own dashboard, not one that's shared with you.)

In the indicators section, choose the indicators to include in the tile.

In the display section, first choose the reporting period(s) you'd like to use.

- The **Last closed** option will show *for each indicator* the last closed reporting period, based on the most recent reporting period end date, that has targets. In the example above you can see that different indicators have different "last closed" reporting periods. This tile will update over time to always use the last closed reporting periods, not the ones shown when you create the tile.
- The **Current/Upcoming** option is similar, but uses the reporting periods with the nearest end dates in the future.
- Choosing a Fixed reporting period will use a single reporting period for all indicators. Because only one reporting period can be selected, indicators in the tile should belong to the same reporting cycle (*e.g.* quarterly, annual, *etc.*).
- Choose to display the data for either just one reporting period (incremental) or all data up to that point (cumulative).
- Finally, choose how the indicator should be labeled.

Tile Configuration *

Show							
Code and Name Code Name Ref #							

The parameters for this tile are defined in each indicator's **Targets & Data** tab. (**Program Info > Indicators >** *select indicator*).

- Set the **Progress Interpretation** as either "higher is better" (*e.g.* # people trained) or "lower is better" (*e.g.* # people infected).
- Define the Success Ranges that show a progress icon for Good (green), Warning (yellow), or Bad (red).
- A grey square appears on the tile if there are no targets for that reporting period.

()) I	DevResults							Done			

By default, indicators are defined as higher is better, with good as 100% or more and bad as under 100%, but you can add a warning and set each to whatever you'd like.

In this example, good is 90% or up, warning is 80-90%, and bad is under 80%.

Success Ranges					
Progress Interpretation	Higher is better 🔻				
Good	90 % or higher				
Warning	80 % to less than 90%				
Bad Less than 80%					

In this example, lower values are better (*e.g.* # people infected). Good is 100% of the target or *less*, warning is 100-120%, and bad is over 120%.

Success Ranges				
Progress Interpretation	Lower is better			
Good	100 % or lower			
Warning	120 % to more than 100%			
Bad	More than 120%			

Progress to Activity Target Tile

This tile works just like the Progress to Global Target tile, but it displays information for only one activity. When you select this tile, select the activity you'd like to visualize before adding the tile to your dashboard.

The resulting tile will display analyses of that activity's targets rather than global targets for the selected indicators.
