

Archive and Export Options

Last Modified on 09/25/2025 11:44 am EDT

Many DevResults users want to or are required to export and download copies of their data, either to conduct offline data analysis, purely for archival purposes, or something in between. This article provides an overview of the options available, and the tradeoffs involved with each.

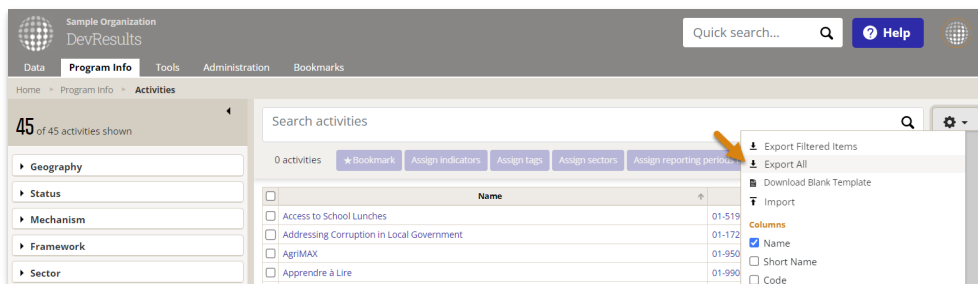

- **Export index pages**
- **Export reporting period data**
- **Export results reports**
- **Export entire instance**
- **Other options**

Export index pages

The easiest way to extract content and configuration details from your DevResults site is to download an Excel file with the entire contents of a given index page.

These exports work great for creating historical snapshots for reference, or even for uploading to other systems. However, they don't contain much linking information necessary to recreate relationships between components. They also don't contain any results data.

To export an index page, navigate to such a page from the main navigation menu and choose **Export All** from the menu in the upper right hand corner.

Index page exports are available for:

- Projects
- Indicators
- Data tables (see also **Download all**)
- Results frameworks
- Disaggregations
- Reporting Periods
- Locations
- Logic Checks
- Organizations
- Users
- Groups
- Tags
- Mechanisms
- Exchange Rates

The downloaded files will look similar to the following Excel file, depending on the index page.

	A	B	C	D	E	F	G	H	I	J
1	Name	Short Name	Code	Ref #	Start Date	End Date	Status	Primary Contact	Primary Organization

Export reporting period data

Indicator results can be download per results framework from each reporting period page in a machine-readable Excel file. You can also download all narrative response data in a single Excel file for the entire reporting period from the same menu.

These exports work great for archiving data or for creating offline data reference sheets at the close of a reporting period. While the data can be imported and used by other systems, users do so at their own risk, given that the results aggregation logic built into DevResults will not be available when working with raw data outside the app.

To export reporting period data, navigate to the reporting period index (**Program > Reporting Periods**), select a reporting period, and then choose **Export all reporting period data**, select a results framework in the following popup, and click, **Export**. A download link will be sent to the email address of your user account shortly (check your spam if it does not arrive in a few minutes).

To export narrative response data, the process is largely the same — navigate to the reporting period index (**Program > Reporting Periods**), select a reporting period, and then choose **Download narrative responses**.

The screenshot shows the DevResults application interface for the '2023 Q3' reporting period. The 'Status by Activity' table is displayed, and a context menu is open over the table, highlighting the 'Export all reporting period data' option. The table contains the following data:

Code	Short Name	Activity	Awarding Organiz
AG-01	CDRA	Capacity Development in Rural Areas	USAID
AG-02	GARP	Guinean Agricultural Research Program	USAID
AG-04	ELAR	Enhancing Local Agricultural Research	USAID
AG-06	CLG	Capable Local Governance	DoS
AG-07	AgriMAX	AgriMAX	USAID
AG-08	CLT	Changing Lives through Technology	Gates

Note that the **Export All** option in this menu will only export the visible table of projects that report on indicators for this reporting period.

The raw results data will look similar to the following Excel file.

1	Result	Indicator Title	Indicator Code	Activity	Activity Code	Reporting Period	Location	Guinea	Region	Prefecture	IsPrimary
170	958	# students tested in reading comprehension by the end of the primary cycle	4.1.2-a-D	Access to School Lunches	ED-08	2019 Q2	Botoré	Guinea	Mamou	Mamou

197	1630	# students tested in reading comprehension by the end of the primary cycle	4.1.2-a-D	Access to School Lunches	ED-08	2019 Q2	Foukoura	Guinea	Kankan	Kankan	
198	2210	# students tested in reading comprehension by the end of the primary cycle	4.1.2-a-D	Access to School Lunches	ED-08	2019 Q2	Foukoura	Guinea	Kankan	Kankan	
199	555	# students tested in reading comprehension by the end of the primary cycle	4.1.2-a-D	Access to School Lunches	ED-08	2019 Q2	Foukoura	Guinea	Kankan	Kankan	
200	700	# students tested in reading comprehension by the end of the primary cycle	4.1.2-a-D	Access to School Lunches	ED-08	2019 Q2	Foukoura	Guinea	Kankan	Kankan	

Narrative responses will look similar to the following Excel file.

1	Reporting Period	Activity	Question	Answer
2	2019 Q1	Access to School Lunches	Expected Results	We're going to hit all our targets.
3	2019 Q1	Agrimax	Expected Results	Project delayed due to heavy rains.
4	2019 Q1	Access to School Lunches	Indicator Comment	Our M&E plan should be revised to reflect new activities.

Export results reports

One of the best ways to export select indicator results data from the system in a useful format is to create a MultiMatrix report.

These reports can be saved and replicated at the end of each reporting period for consistency, and at the level of aggregation most appropriate to the most users (rather than in the raw format of the option above.) However, once a report is downloaded, there is no way to change the format or disaggregation level as it is not linked to the raw data or aggregation logic as a static export.

To learn how to create, save, and download MultiMatrix reports, see the [article on MultiMatrix](#).

[back to top](#)

Export entire instance

Exporting an entire instance is the most comprehensive way to extract all data for an entire site out of the DevResults backend database and onto your own data storage drive. The instance export tool replicates the 'normalized' format of DevResults' relational database consisting of numerous individual, linked tables of data.

The exported tables are perfect for archiving data on your own hardware (where required) or for extracting the data at the end of your DevResults subscription. While each table can be accessed and referenced by a user with access, the overall utility of the dataset will be limited without an app like DevResults to link the tables together and display the content in a user-friendly interface.

To learn how to download and use the instance export tool, see the [article on Exporting an Entire DevResults Instance](#). Note that the export tool requires some familiarity with PowerShell and/or command line interface (CLI) scripting; we can answer questions and walk you through the process via our Helpdesk at help@devresults.com.

Other options

If you haven't come across the appropriate solution for you needs yet, there are a few other options that you should

be aware of.

- You can interact with your data directly or build integrations using our [API documentation](#) and [use case examples](#) as a guide.
- You can use our [Power BI Connector](#) to query data directly from Power BI.
- You can request [Custom Queries](#) to gather specific information you need on a regular basis in a particular format.
- You can publish open data about your projects, results, and finances using the [International Aid Transparency Initiative \(IATI\)](#) format, which can be exported easily using the [DevResults IATI activity and organization file generator](#).
